

WV Project CommuniTree Planting at Greenwood Elementary School

Students, staff, and parents from Greenwood Elementary School, with the help of volunteers from the Sleepy Creek Watershed Organization, planted a mix of 16 shade and flowering trees at the school in Berkeley Springs on April 18, 2015.

Trees planted at the school include 10 shade trees and 6 flowering trees.

It was a beautiful spring morning at the elementary school on the day of the tree planting. Volunteers gathered at the planting site about an hour before the tree planting to set out trees and prep the planting site.

Thirty-eight volunteers (5 from the Sleepy Creek Watershed Association, 18 parents and adults, and 14 students) participated on

the day of the tree planting.

The 16 trees were distributed across the school grounds - primarily behind the school building and in the playground. One tree replaced a tree that failed to establish from the [Spring](#)

[2014](#) planting. All of the students and parents were enthusiastic about the planting and worked well as small teams.

The principal offered lunch to all the participants at the end of the planting.

This was an awesome project!

A word from the Project Leader, Charles Marsh:

“CommuniTree coordination and instructions were excellent. Couldn't have been better. Great job!”
